# COTTON CANDLE WICKS

Cotton braided candle wicks are the best choice for all kinds of candles. They are smokeless and self-extinguished.

# HEMP CANDLE WICKS

Hemp braided candle wicks are made with natural fibers of hemp instead of cotton. They increase rigidity of the wick and can assure candle burn straightly.

# PAPER CANDLE WICKS

Paper braided candle wicks are a flat braid wick composed of cotton with special paper woven around them. These wicks provide excellent capillary action and significant rigidity.

# ZINC CORE CANDLE WICKS

Zinc core candle wicks are made with a cotton fiber braid, surrounded by a zinc core. Zinc wicks are known for allowing wicks to stand up in applications, and are thus frequently used in container candles.

# WOOD CANDLE WICKS

Wood candle wicks are composed of wood and provide 100% rigidity in candles. These wicks do not require any type of trimming, produce no mushrooms, and allow for a fast melt pool.

# PRE TABBED CANDLE WICKS

All pre tabbed candle wicks are dipped in high melt paraffin wax. They can also be coated with soya wax and beeswax. All wicks are lead free.
